

## Millikan-Versuch

$$\eta = 18.6 \times 10^{-6} \text{ Pas}; \quad \rho_{\text{air}} = 1.16 \text{ kg/m}^3; \quad \rho_{\text{oil}} = 900 \text{ kg/m}^3$$

a)  $v = 3.7 \times 10^{-6} \text{ m/s}$

$$F_g = Vg\rho_{\text{oil}} = \frac{4}{3}r^3\pi g\rho_{\text{oil}}$$

$$F_R = a\eta v = 6\pi r\eta v$$

$$F_A = Vg\rho_{\text{air}} = \frac{4}{3}r^3\pi g\rho_{\text{air}}$$

$$F_{\text{tot}} = F_g - F_A - F_R = 0$$

$$r = \sqrt{\frac{9\eta v}{2g(\rho_{\text{oil}} - \rho_{\text{air}})}} = \underline{\underline{1.88 \times 10^{-7} \text{ m}}}$$

b)  $E = 500 \text{ V/m}; \quad v = 0 \text{ m/s}$

$$F_{\text{el}} = qE$$

$$F_{\text{tot}} = F_g - F_A - F_R - F_{\text{el}}$$

$$q = \frac{2\pi r(2gr^2(\rho_{\text{air}} - \rho_{\text{oil}}) + 9\eta v)}{3E} = \underline{\underline{4.86 \times 10^{-19} \text{ C}}}$$

c)

## Massenspektrograph - Parabelmethode

a)  $T := \frac{l}{v_z}$

$$F_E = qE = m \frac{dv_y}{dt}$$

$$v_y(t) = \frac{qE}{m} t$$

$$v_y(T) = \underline{\underline{\frac{qEl}{mv_z}}}$$

$$F_B = qv_z B = m \frac{dv_x}{dt}$$

$$v_x(t) = \frac{qB}{m} v_z t$$

$$v_x(T) = \underline{\underline{\frac{qBl}{m}}}$$

$$A_E = \int_0^T v_y(t) dt = \frac{qEl^2}{2mv_z^2}$$

$$A_B = \int_0^T v_x(t) dt = \underline{\underline{\frac{qBl^2}{2mv_z}}}$$

b)  $\tau = \frac{D}{v_z}$

$$y = A_E + v_y(T)\tau = \frac{qEl}{mv_z^2} \left( \frac{l}{2} + D \right)$$

$$x = A_B + v_x(T)\tau = \frac{qBl}{mv_z} \left( \frac{l}{2} + D \right)$$

$$v_z = \frac{qBl \left( \frac{l}{2} + D \right)}{mx}$$

$$y(x) = \underline{\underline{\frac{mE}{qB^2l \left( \frac{l}{2} + D \right)} x^2}}}$$

c)  $x = 0.05 \text{ m}; \quad D = 0.4 \text{ m}; \quad l = 0.03 \text{ m}; \quad a = 1.5 \text{ mm}; \quad \Delta m = 2 \text{ u}$   
 $U = 15 \text{ V}; \quad B = 0.1 \text{ T}$

$$\Delta y = \frac{\Delta m E}{qB^2l \left( \frac{l}{2} + D \right)} x^2 = \underline{\underline{0.004 \text{ m}}}$$

## Gruppengeschwindigkeit eines freien Teilchens

a) The group velocity of a wave is the velocity of the enveloping wave, whereas the phase velocity is the speed the the inscribed wave travels through space.

b) Dispersion relation gives the relationship between the speed and the frequency of a wave. dispersion usually happens when waves go from one medium into another and there a change in speed happens. Electromagnetic waves in vacuum don't show dispersion because it always travels in the same medium and the frequency of em-waves does not depend on its speed. Matter waves however do have a speed dependent frequency and therefore do experience dispersion.

c)

d)
