## Millikan-Versuch

$$\eta = 18.6 \times 10^{-6} \text{ Pas}; \quad \rho_{\text{air}} = 1.16 \text{ kg/m}^3; \quad \rho_{\text{oil}} = 900 \text{ kg/m}^3$$

a) 
$$v = 3.7 \times 10^{-6} \text{ m/s}$$

$$F_{\rm g} = Vg\rho_{\rm oil} = \frac{4}{3}r^3\pi g\rho_{\rm oil}$$

$$F_{\rm R} = a\eta v = 6\pi r \eta v$$

$$F_{\rm A} = Vg\rho_{\rm air} = \frac{4}{3}r^3\pi g\rho_{\rm air}$$

$$F_{\text{tot}} = F_{\text{g}} - F_{\text{A}} - F_{\text{R}} = 0$$

$$r = \sqrt{\frac{9\eta v}{2g(\rho_{\text{oil}} - \rho_{\text{air}})}} = \underline{1.88 \times 10^{-7} \text{ m}}$$

b) 
$$E = 500 \text{ V/m}: v = 0 \text{ m/s}$$

$$F_{\text{el}} = qE$$

$$F_{\text{tot}} = F_{\text{g}} - F_{\text{A}} - F_{\text{R}} - F_{\text{el}} = 0$$

$$q = \frac{2\pi r \left(2g r^2 (\rho_{\text{air}} - \rho_{\text{oil}}) + 9\eta v\right)}{3E} = 4.86 \times 10^{-19} \text{ C}$$

c)  $v = 1.2 \times 10^{-6}$  m/s Case 1: Oil receives an electron; Case 2: Oil loses a Neutron Case 1:

$$F_{\text{tot}} = F_{\text{g}} - F_{\text{A}} - F_{\text{R}} - F_{\text{el}} = 0$$
  
$$q = 6.44 \times 10^{-19} \text{ C} = 4e$$

The roentgen rays knocked an electron out of an air molecule and into the oil droplet. It now has a net charge of  $4^-$ 

## Massenspektrograph - Parabelmethode

a) 
$$T := \frac{l}{v_z}$$

$$F_{E} = qE = m \frac{\mathrm{d}v_{y}}{\mathrm{d}t}$$

$$v_{y}(t) = \frac{qE}{m}t$$

$$v_{y}(T) = \underline{\frac{qEl}{mv_{z}}}$$

$$F_{\rm B} = q v_z B = m \frac{\mathrm{d} v_x}{\mathrm{d} t}$$

$$v_x(t) = \frac{qB}{m} v_z t$$

$$v_x(t) = \frac{qB}{m}v_z t$$
$$v_x(T) = \underline{\frac{qBl}{m}}$$

$$A_{\rm E} = \int_0^T v_y(t) \, \mathrm{d}t = \frac{qEl^2}{2mv_z^2}$$

$$A_{\rm B} = \int_{0}^{T} v_x(t) \, \mathrm{d}t = \underbrace{\frac{qBl^2}{2mv_z}}_{0}$$

b) 
$$\tau = \frac{D}{v_z}$$

$$y = A_{\rm E} + v_y(T)\tau = \frac{qEl}{mv_z^2} \left(\frac{l}{2} + D\right)$$

$$x = A_{\rm B} + v_x(T)\tau = \frac{qBl}{mv_z} \left(\frac{l}{2} + D\right)$$

$$v_z = \frac{qBl\left(\frac{l}{2} + D\right)}{mx}$$
$$y(x) = \frac{mE}{qB^2l\left(\frac{l}{2} + D\right)}x^2$$

c) 
$$x = 0.05 \text{ m}$$
;  $D = 0.4 \text{ m}$ ;  $l = 0.03 \text{ m}$ ;  $a = 1.5 \text{ mm}$ ;  $\Delta m = 2 \text{ u}$   $U = 15 \text{ V}$ ;  $B = 0.1 \text{ T}$ 

$$\Delta y = \frac{\Delta mE}{qB^2l(\frac{l}{2} + D)} x^2 = \underline{0.004 \text{ m}}$$

## Gruppengeschwindigkeit eines freien Teilchens

$$\lambda_{\mathrm{dB}} = \frac{h}{mv_T}$$

- a) The group velocity of a wave is the velocity of the enveloping wave, whereas the phase velocity is the speed the the inscribed wave travels through space.
- b) Dispersion relation gives the relationship between the speed and the frequency of a wave. dispersion usually happens when waves go from one medium into another and there a change in speed happens. Electromagnetic waves in vacuum don't show dispersion because it always travels in the same medium and the frequency of em-waves does not depend on its speed. Matter waves however do have a speed dependent frequency and therefore do experience dispersion.

c) 
$$p = mv_g$$
;  $E_{kin} = \frac{mv_g^2}{2} = \frac{p^2}{2m}$ 

$$v_g = v_T = \frac{p}{m} = \frac{\partial E_{\rm kin}}{\partial p}$$

d) 
$$k = \frac{2\pi}{\lambda} = \frac{mv_T}{\hbar}$$
;  $\omega = \frac{v_T\pi}{\lambda} = \frac{E_{\rm kin}}{\hbar} = \frac{\hbar k^2}{2m}$ 

$$v_g = \frac{\partial \omega}{\partial k} = \frac{\hbar k}{m} = \underline{v_T}$$
